#	Paper	Status	Why it matters for your thesis	Code
1	Evaluating Object Hallucination in Large Vision-Language Models (POPE)	EMNLP 2023	Start here. Defines a clean, deterministic object-hallucination evaluation protocol.	Official
2	Unveiling Uncertainty: Calibration and Performance of MLLMs	COLING 2025	Your direct foundation for MLLM calibration: confidence can look good while being wrong.	Official
3	On Calibration of Modern Neural Networks	ICML 2017	Learn ECE and temperature scaling properly. Old, but still essential.	Not needed
4	Selective Classification for Deep Neural Networks	NeurIPS 2017	Learn risk–coverage: a model may abstain, but must remain useful.	Official
5	Language Models with Conformal Factuality Guarantees	ICML 2024	Mathematical basis for using conformal prediction to control factual-error risk. Text-only, but conceptually crucial.	Not verified
6	Towards Statistical Factuality Guarantee for Large Vision-Language Models (ConfLVLM)	EMNLP 2025	Directly transfers conformal factuality to generated visual claims. Core paper.	Not verified
7	Look Again Before You Abstain	arXiv preprint, 2026	Most important recent paper: answer, abstain, or acquire better evidence. Also exposes the over-abstention problem.	Not verified
8	AMBER: An LLM-free Multi-dimensional Benchmark for MLLM Hallucination Evaluation	arXiv preprint, 2023	Strong fit because its evaluation is LLM-free and covers object, attribute, and relation hallucination.	Official
9	HallusionBench	CVPR 2024	Separates language hallucination from visual illusion using controlled question pairs.	Official

#	Paper	Status	Why it matters for your thesis	Code
10	Visual Contrastive Decoding (VCD)	CVPR 2024	A simple training-free hallucination-mitigation baseline. You need this before proposing any new evidence-sensitive method.	Official
11	Calibrating Uncertainty Quantification of Multi-Modal LLMs using Grounding	arXiv preprint, 2025	Very close to your framing: confidence should reflect grounding, not merely output consistency.	Not verified
12	Sample then Identify: Risk Control and Assessment in MLLMs (TRON)	arXiv preprint, 2024	Read for black-box, sampling-based risk control in open-ended MLLMs. Do not treat its VideoQA setting as a reason to reopen long-video research.	Not verified
13	CLASH: A Benchmark for Cross-Modal Contradiction Detection	arXiv preprint, 2025	Your best paper for image-text conflict and modality dominance.	Not verified
14	Seeing without Looking: Do Vision-Language Benchmarks Really Test Vision?	CVPR 2026 Workshop	Critical warning: correct answers do not prove the model used the relevant visual evidence.	Not verified
15	VLM-RobustBench	ICML 2026	Best current entry for controlled visual degradation and shift. It shows spatial/resampling changes can be more damaging than visually severe corruption.	Not verified
